GDA Project Files Index

This is the short version. You do not need to manage every file from the chat.

The files that matter

1. gda-rescue-map.md

Use this as the master map for the rebuild. It explains what was fixed, what is stable, what still needs work, and the operating plan.

2. gda-react-smoke-tests.zip

Use this when you want to run the daily health check from your Windows machine.

After unzipping it, the normal command is:

```
powershell
```

```
npm run ops
```

First-time setup only:

```
powershell
```

```
.\setup-qa-agent-windows.ps1
```

3. gda-command-react-stabilized.zip

This is the patched React source package where direct n8n webhook calls were removed and replaced with server-side /api/... proxy calls.

Use this as the React source baseline going forward.

4. gda-command-react-qa-center.zip

This is the React source package with the new QA Center page added under Platform.
