

## GDA Text Layer PDF Test Document

This PDF has a proper text layer and should not trigger OCR fallback.

The pdf-parse library should extract this text directly without needing Tesseract. This serves as a control test fixture to verify that the OCR code path is not invoked for text-rich PDFs.

Key data points for verification:

- Document type: text-layer PDF
- Extraction method: native (pdf-parse)
- OCR invoked: No
- Expected text length: > 100 characters
