

GDA React QA Center — v1 Report

Summary

Added a user-facing QA Center page to GDA Command. It runs read-only health checks and dry-run safety probes from the browser via the existing same-origin /api proxy. No PowerShell, no secrets in the React app, no direct n8n webhook calls.

Source patched: /home/user/workspace/deploy-react-stabilized/gda-command-main/ (matches the project's CLAUDE.md rule that this is the canonical source — /opt/gda-command/src/App.jsx in production).

Files changed

File	Change
src/components/pages/QACenterPage.jsx	New. QA Center page component — read-only and dry-run check sets, results table, summary counters, plain-English next-action banner, stable data-testid attributes throughout.
src/App.jsx	(1)Added import QACenter from './components/pages/QACenterPage'; next to existing page imports.(2)Added { id: 'qa-center', label: 'QA Center', icon: '🔍' } to NAV_ITEMS under the PLATFORM divider, placed between Platform Health and Platform Guide.(3)Added 'qa-center': React.memo(QACenter) to the PAGES route map.

No other files modified. No styling files added (per repo convention all styles inline). No new dependencies.

Checks included

Read-only health checks (Run Health Check button)

All hit /api/<path> via same-origin POST with Content-Type: application/json and a small body. Passed/failed/empty/auth-fail are classified by HTTP status + body emptiness.

ID	Path	Body
platform-health	gda-platform-health	{}
dashboard-mega	gda-dashboard-mega	{}
trends	gda-trends	{}
opp-tracker	gda-opp-tracker	{}

ID	Path	Body
launchpad-funnel	gda-launchpad-funnel	{}
deep-research-history	gda-deep-research-history	{ action:'list', limit:1 }
capture-plan	gda-capture-plan	{ action:'list', limit:1 }
morning-briefing	gda-morning-briefing	{}

Dry-run checks (Run Dry-Run Checks button — labeled “NO PRODUCTION WRITES”)

ID	Path	Body
save-opp-dryrun	gda-save-opp	{ dryRun:true, opp:{ title:'QA dry run probe', source:'qa-center' } }
risk-dryrun	gda-risk	{ dryRun:true, action:'analyze', target:'qa-center-probe' }

If a backend workflow does not honor `dryRun:true`, the row will still light up green but the human-readable note above the dry-run table tells the operator to verify with the platform engineer.

Display surface

Each test pass renders:

- Overall status badge (Operational / Degraded / Critical Issues / Not run) + last-run timestamp.
- Counters: Total / Passed / Failed / Auth Fails / Empty.
- A Next action banner with plain-English guidance based on which categories are red.
- Per-row table: check label, `/api/...` path, status pill, HTTP code, duration ms, response bytes.
- Separate dry-run table with explicit “NO PRODUCTION WRITES” pill and a one-line caveat.

Stable data-testid selectors (for QA automation):

- `qa-center-page`, `qa-run-health-check`, `qa-run-dryrun-check`, `qa-overall-status`, `qa-last-run`, `qa-last-dryrun`, `qa-recommendation`, `qa-dryrun-summary`
- Counters: `qa-counter-total`, `qa-counter-passed`, `qa-counter-failed`, `qa-counter-auth`, `qa-counter-empty`

- Per-row: ``qa-ro-row-<id>``, ``qa-ro-status-<id>``, ``qa-ro-http-<id>``, ``qa-ro-ms-<id>`

Security

- No `x-gda-key`, `x-gda-qa-key`, `gda-api-2026-secure`, or any other secret in client code (grep clean inside `QACenterPage.jsx`).
- All requests go to relative `/api/<name>` — they work in any environment without rebuild.
- Headers limited to `Content-Type: application/json`.

Build result

```
$ node node_modules/.bin/vite build
✓ 678 modules transformed.
dist/index.html          0.29 kB | gzip:  0.23 kB
dist/assets/index-B1eHD2_a.css  0.24 kB | gzip:  0.18 kB
dist/assets/index-C1aFCz1Q.js 1,267.82 kB | gzip: 337.23 kB
✓ built in 5.06s
```

`npm test` is not configured in this repo (the `test` script is the `npm` placeholder). Lint command is not configured either. Reporting clearly per the requirements.

Pre-existing build warnings (not introduced by this patch)

- Duplicate key `"General Services Administration"` in object literal in `src/App.jsx` line ~1706 (and similar duplicate-key warning around line 1672).
- Two CSS minification warnings about an unterminated string token in an inline `<style>` payload.
- Bundle size warning (`> 500 kB`) — same as before this change.

These exist on `main` and were present on the un-patched source as well.

Deploy / test

Per project `CLAUDE.md` rules:

```
cd /opt/gda-command
node node_modules/.bin/vite build
cp -r dist/* /root/gda-frontend/dist/
docker restart n8n-envision-gda-frontend-1
```

Then in the browser: `https://gda.csr-llc.tech/#qa-center` → click **Run Health Check**.

Manual smoke

1. Navigate to **Platform** → **QA Center** in the sidebar.
2. Click **Run Health Check**. Watch rows fill in. Confirm pass/fail counts and HTTP codes match the smoke kit.
3. Click **Run Dry-Run Checks**. Confirm each row labeled `gda-save-opp` / `gda-risk` returns 200 and that the `NO PRODUCTION WRITES` pill is visible.

4. Open DevTools → Network and confirm every request is to `/api/...` on the current origin (no `n8n.csr-llc.tech` requests).

Package

`/home/user/workspace/gda-command-react-qa-center.zip` — full `gda-command-main` source, excludes `node_modules`, `dist`, and `*.bak*` snapshots of `App.jsx`. ~327 KB.
