Summary

- Total workflows: 159
- Active workflows: 156
- Inactive workflows: 3

Testing lanes

Lane	Count	Meaning
Needs classification	75	Unknown; inspect before testing.
Inspect before running	31	Scheduled jobs need node-level review before manual execution.
Read-only or read-heavy	29	Safe first candidates for dashboard health checks, as long as they do not send/update/delete.
Dry-run/test-row required	16	Do not automate real writes until dryRun or cleanup exists.
Approval required - paid/external API	5	Human approval before running because it may spend credits or call external systems.
Approval required - external send	3	Human approval before running because it may send a message/email/notification.

Current recommendation

Use this registry as the triage board. React QA Center covers the read-only layer. Phase B dry-run currently covers save opportunity and risk register. Capture plan, deep research, and competitor crawl/watchlist should not be added to automated dry-run until explicit preview branches are added because they touch AI, external search, sends, or writes.
